🌐 [linkedin.com/in/groenewegjeroen](https://www.linkedin.com/in/groenewegjeroen)

Technology, AI and Product executive who stabilises complex platforms, turns technology strategy into operating change, and builds internal product, data and engineering capabilities. Led transformations in financial services, media and technology, including agentic engineering using LLMs, legacy-platform reliability, post-acquisition integration, data foundations and regulated-system controls. Brings an executive lens to platform choices: customer value, organisational focus, delivery speed and sustainable risk management.

## TRANSFORMATION RESULTS

👥 **65+**

FTE team built from the ground up across product, engineering & data

🕒 **80%+**

Improvement in delivery velocity & time to market through agentic engineering

🔧 **90%**

Reduction in technical complexity through strong build-vs-buy decisions

💰 **10m+**

Profit as the business became net positive and scalable through technology

## RELEVANT EXPERIENCE

Executive leadership across financial services, media and technology: building scalable platforms, teams and operating models. Experience in building organisations from the ground up, growing from startup to scale-up, or integrating larger organisations after acquisition.

Financial services · 2023–current

### BridgeFund

Chief Product & Technology Officer (CPTO) · Amsterdam, Netherlands

- Stabilised a complex legacy technology stack and set a three-year technology strategy aligned to growth objectives, restoring system reliability.
- Built and mentored a 65+ person in-house product, data and engineering team, replacing offshore delivery in Sri Lanka and third-party vendors. Improved delivery velocity and time-to-market by more than 80%, contributing to the business becoming net positive and surpassing 10 million in profit.
- Introduced a product operating model with multidisciplinary teams, OKRs and strategic KPIs, creating a shared structure for prioritisation and performance management.
- Migrated the legacy in-house-built CRM and Loan Management systems to proven SaaS solutions, HubSpot and Mambu, sanitising and cleaning their datasets while removing 90% of technical complexity. This allowed internal teams to focus on the company's core USPs.
- Deployed a generative AI platform and regression models for automated credit-risk assessment, while raising security and IT-compliance controls across DORA, GDPR, AML and AI Act requirements.

Online Services · 2019–2023

## DPG Media

IT Director · Amsterdam, Netherlands

- Integrated IT teams and strategies after the acquisitions of Sanoma Magazines and Pure Digital IT, improving cost efficiency and bridging departmental gaps.
- Established a dedicated data team, roadmap and strategy, and integrated centralised data lakes across enterprise brands, moving the organisation from gut-feel decision-making to a data-driven strategy aligned with business-unit goals.
- Directed a large-scale Zscaler rollout across online services, strengthening enterprise security and regulatory compliance.
- Defined the foundational IT strategy for the digital transformation of Sanoma Media magazine titles.
- Implemented a standardised function and roles matrix for coaching, evaluation and motivation, creating a consistent talent-development framework.

Technology and media · 2017–2019

## Tweakers

Head of Engineering · Amsterdam, Netherlands

- Reframed technical debt as a management priority, delivering a 25% reduction in platform technical debt.
- Established test-driven development, increasing test coverage by 20% and supporting a secure, high-availability platform with uptime, speed and initial-page-load KPIs.
- Redesigned the engineering organisation into three focus groups and added targeted freelance capacity, accelerating project delivery by 40%.
- Built and led three teams of 8+ engineers through senior hiring and coaching, achieving a 95% employee retention rate.

### PERSONAL NOTE

Technology has shaped my life since receiving a Commodore 64 at eight. It opened the door to coding, games and engineering, and to a lifelong habit of making: from advanced smart homes to complex software systems, and from arcade cabinets built from scratch to coding my own games. That curiosity became a career in technology and still drives a simple aim: helping businesses and their missions succeed through technology.

### TECHNICAL FOUNDATION

Product and engineering leadership across domain-driven design, AWS, Docker, Kubernetes, CI/CD, Linux, Apache and NGINX; software delivery with PHP/Symfony, JavaScript/TypeScript, HTML/CSS and test-driven development; data platforms with MySQL, PostgreSQL and MongoDB.
